## Update on the Dengue Situation in the Western Pacific Region & the Americas

---

This report describes the epidemiology of dengue in the **World Health Organization** Western Pacific Region and the Americas. [Western Pacific region data](#) are compiled from open sources (national indicator-based surveillance systems) with the exception of Cambodia, Lao People’s Democratic Republic, Viet Nam, and the Philippines, where data are provided from WHO Country Offices, and for Pacific Island Countries, where syndromic surveillance data are provided by **WHO’s Division of Pacific Technical Support**. Data from the Americas are drawn from the **Pan American Health Organization’s** [PLISA Health Information Platform for the Americas](#). Data for Myanmar, Malaysia, Thailand, and Indonesia are drawn from [ASEAN Biological Threats Surveillance Centre](#), and for Hong Kong SAR, its [Centre for Health Protection, Department of Health](#). Information is reported based on countries’ standard dengue case definitions. Due to differences in surveillance methods and reporting practices, a comparison of trends between countries and areas is not possible, however national trends can be observed over time.
